

SHEET INDEX

200 µm Jet Power (90) - 1 of 4

NO-DESIGN - 4 sections

1-A-DRAWN - 4 sections

20-IMP-1 - 3 sections

FRAG-6 - 1 section

FRAG-7 - 2 sections

FRAG-8 - 4 sections

DATE-PURCH-1 - 1 section

CONTROL-01 - 1 section

20-LEVE - 1 section

NO A-7 - 30 sections - 308 components

NET ADDRESS

Internal functions are named for what they *give*.

Islands, often used at that *K* job e.g. *WQCE*, *SRP*

Islands, 30 endpoints of a service path e.g. *WBLA*, *W*

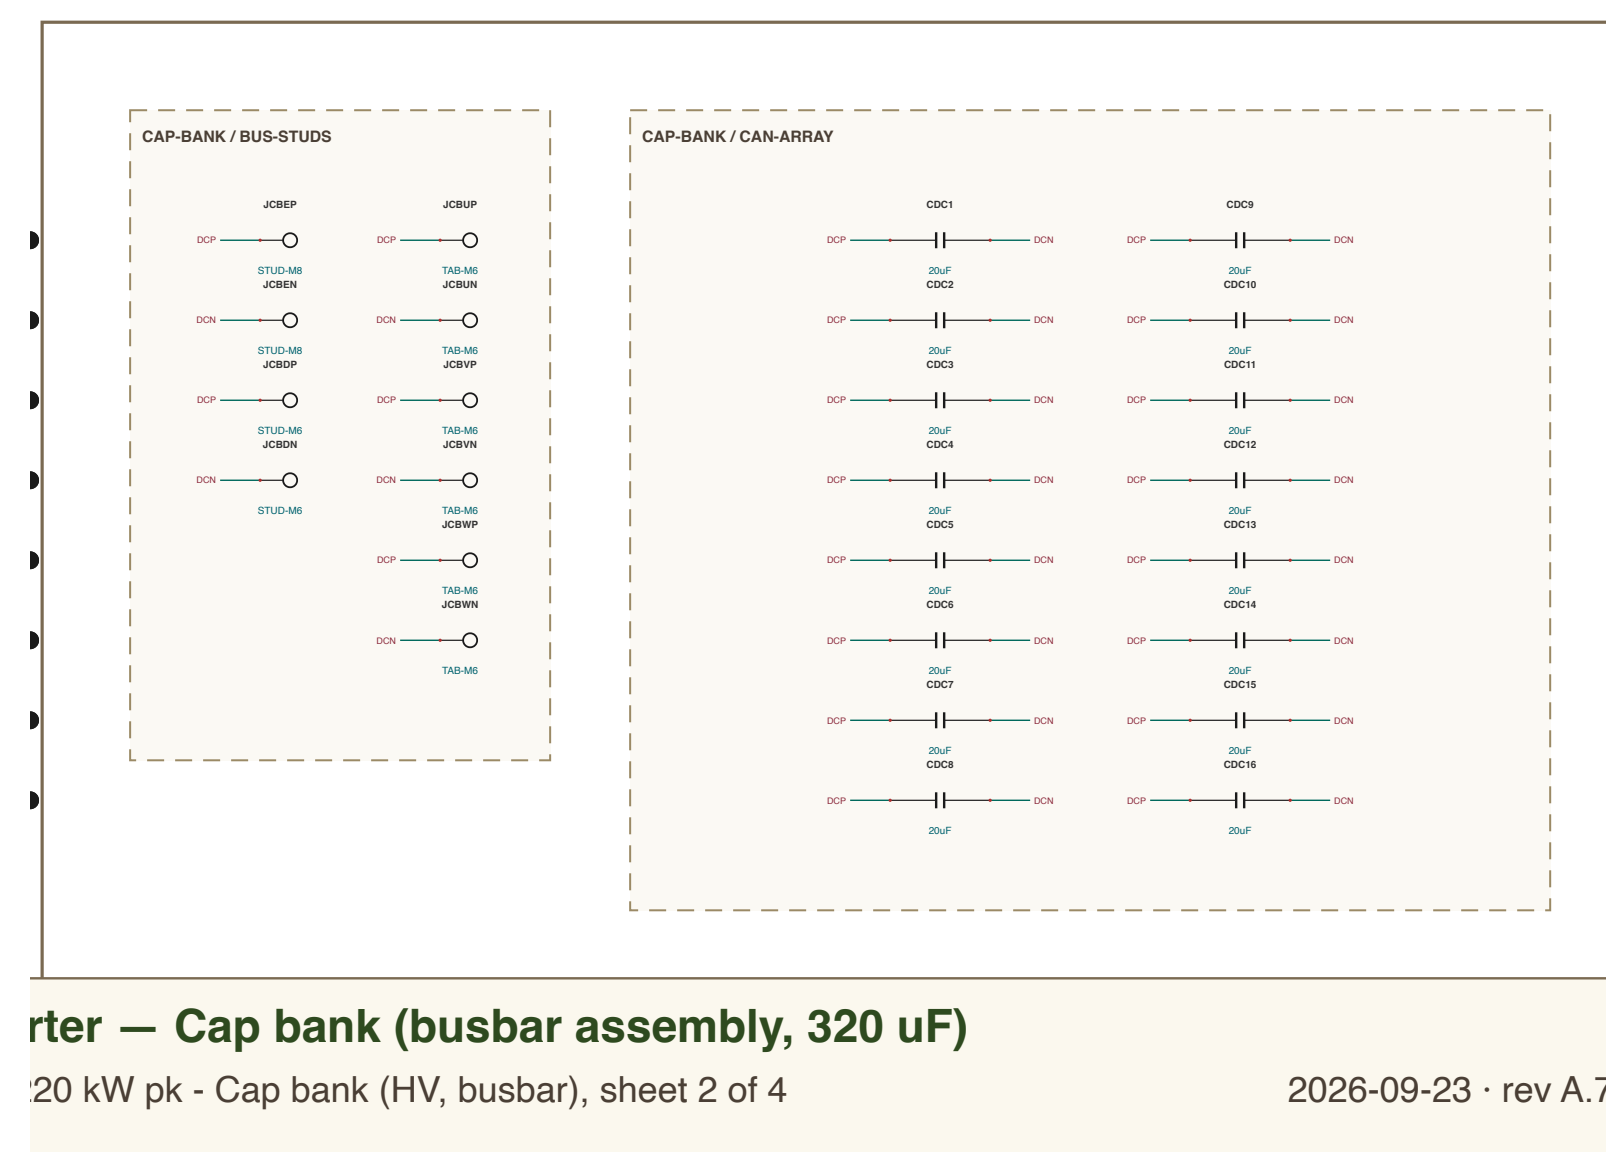

Islands, coding tag between *Islands* e.g. *WQCE*, *12*

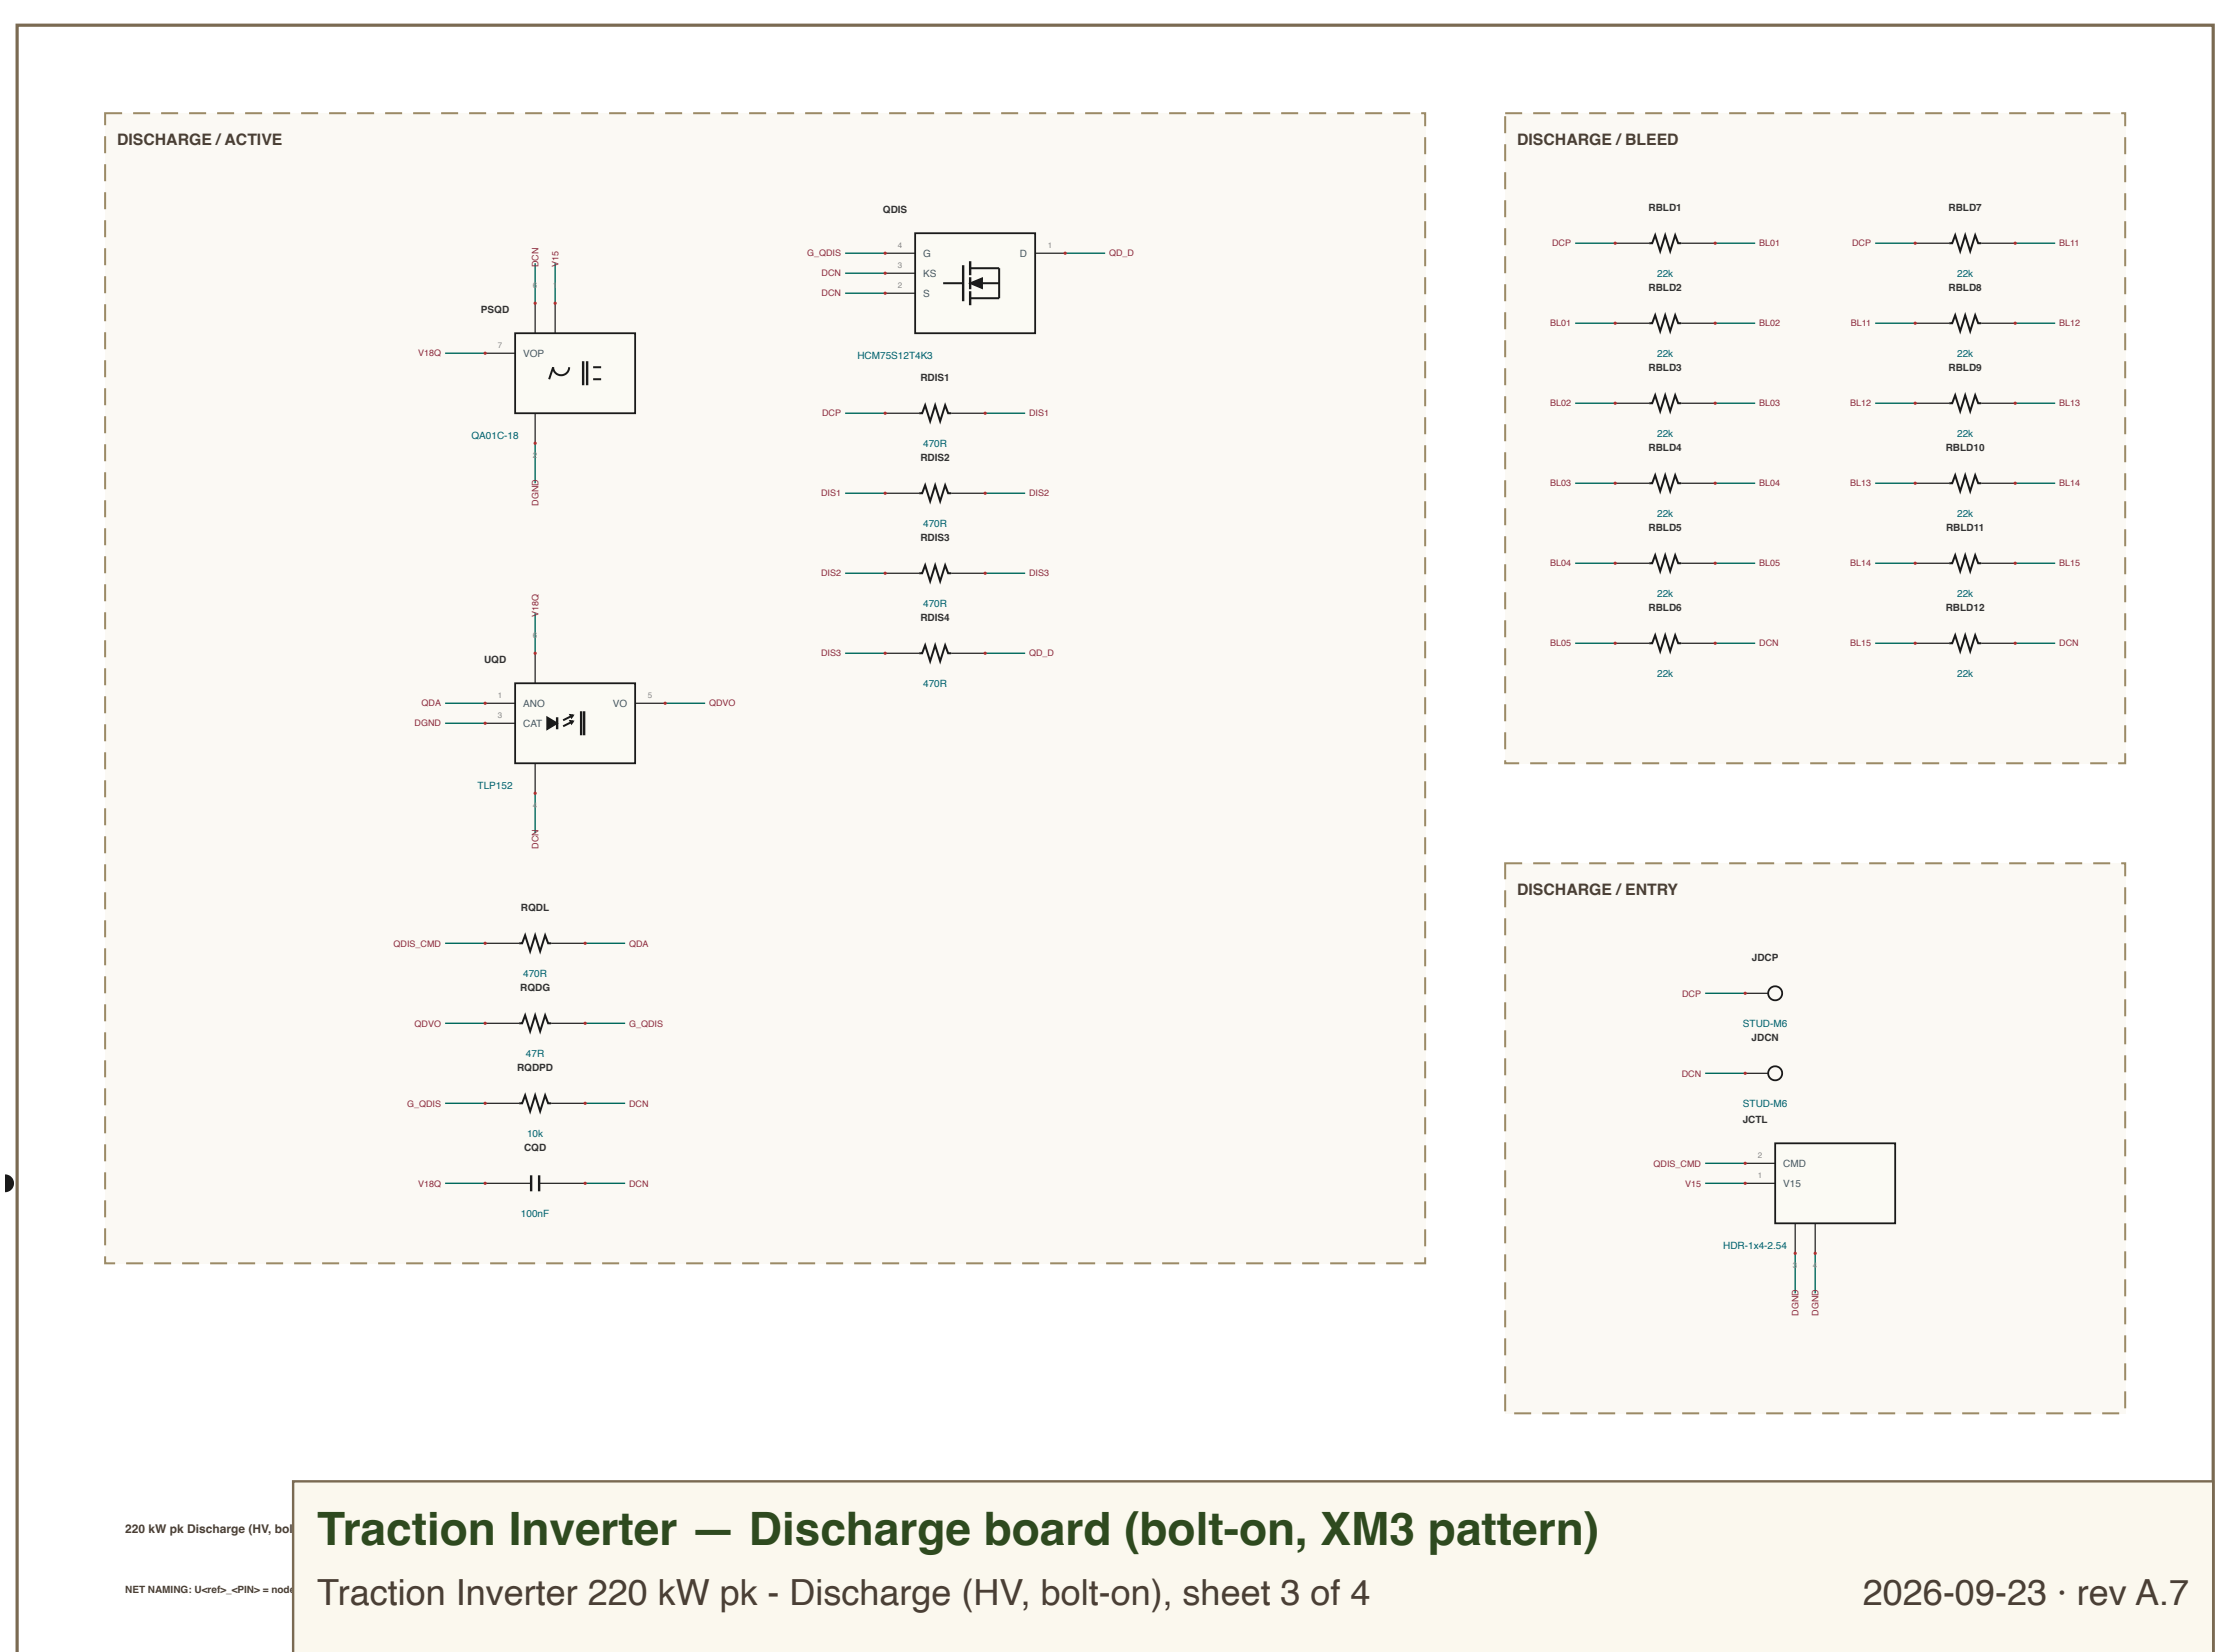

at others are explicit design notes

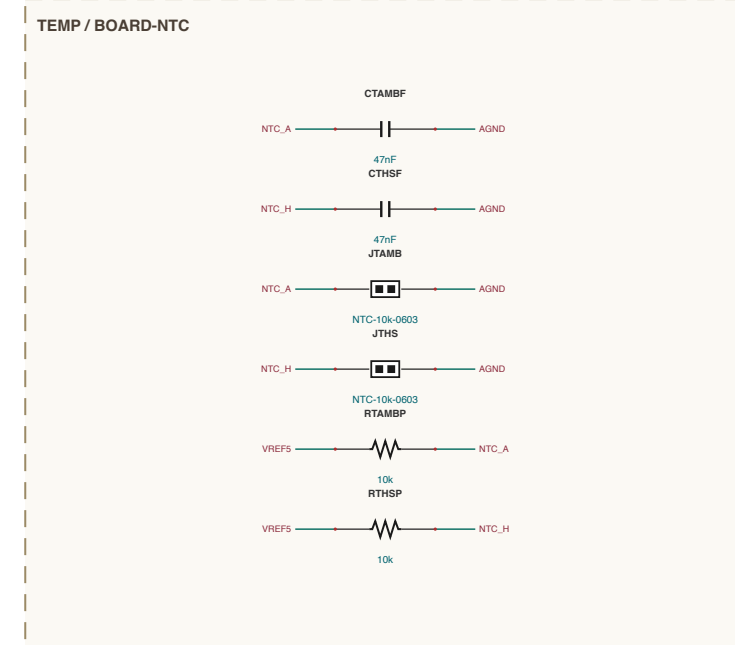

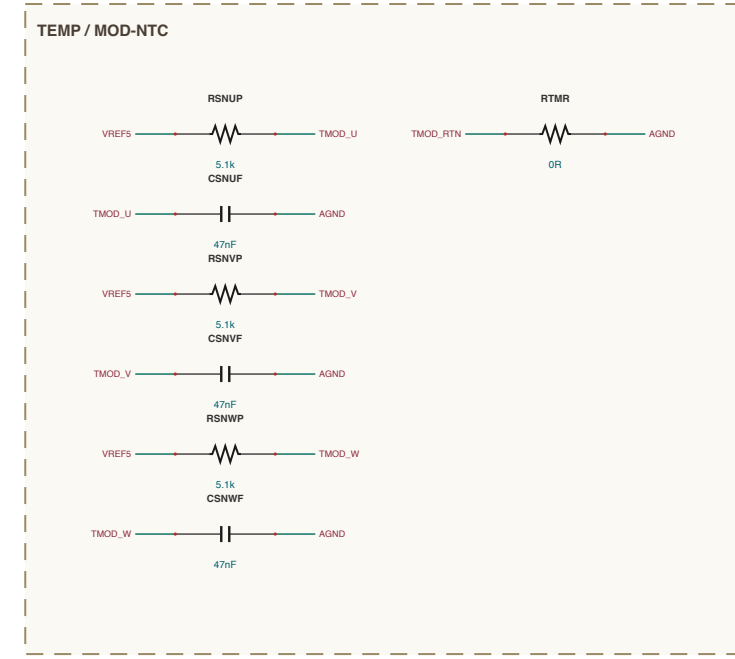

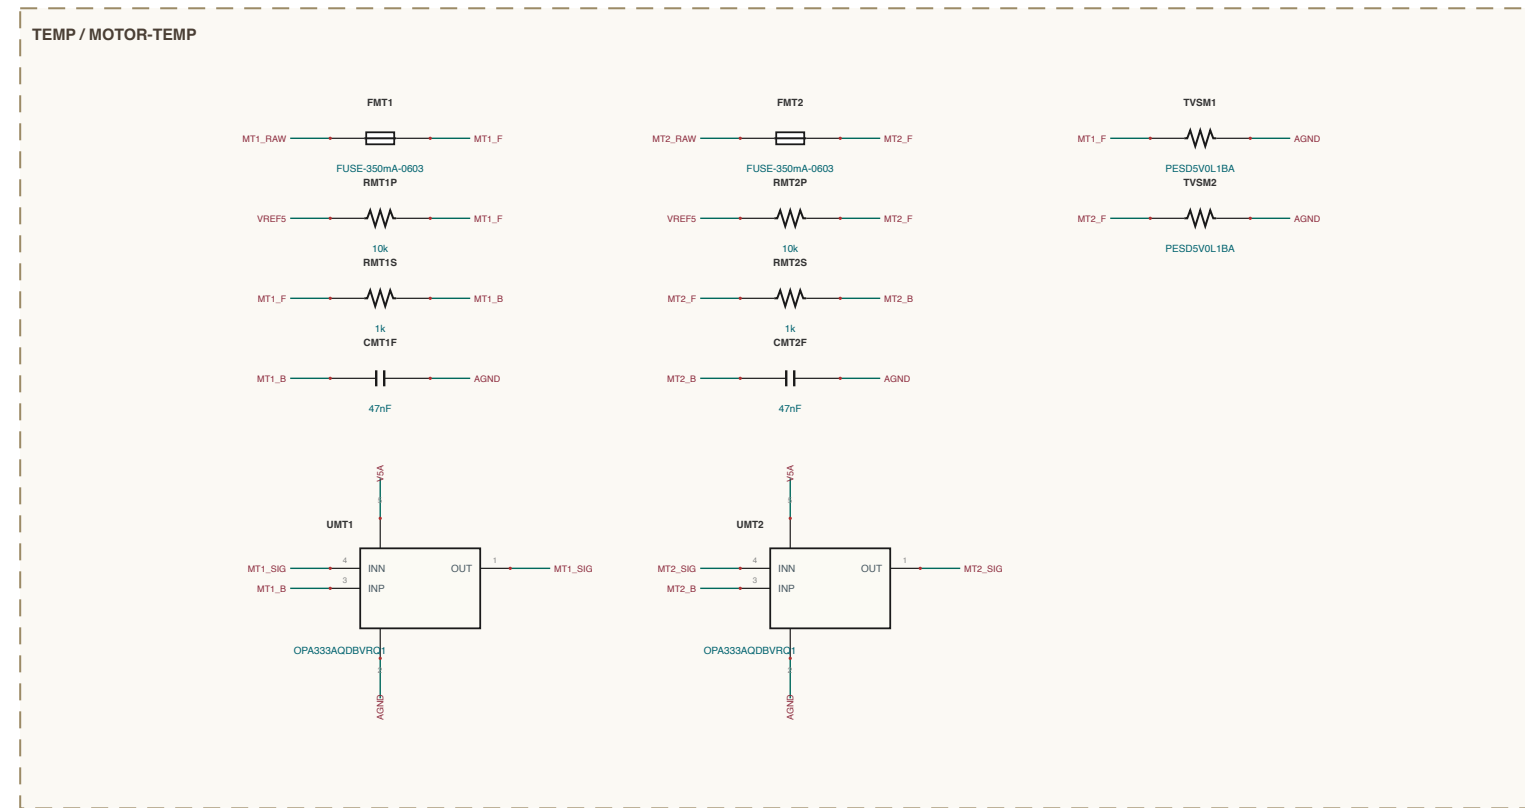

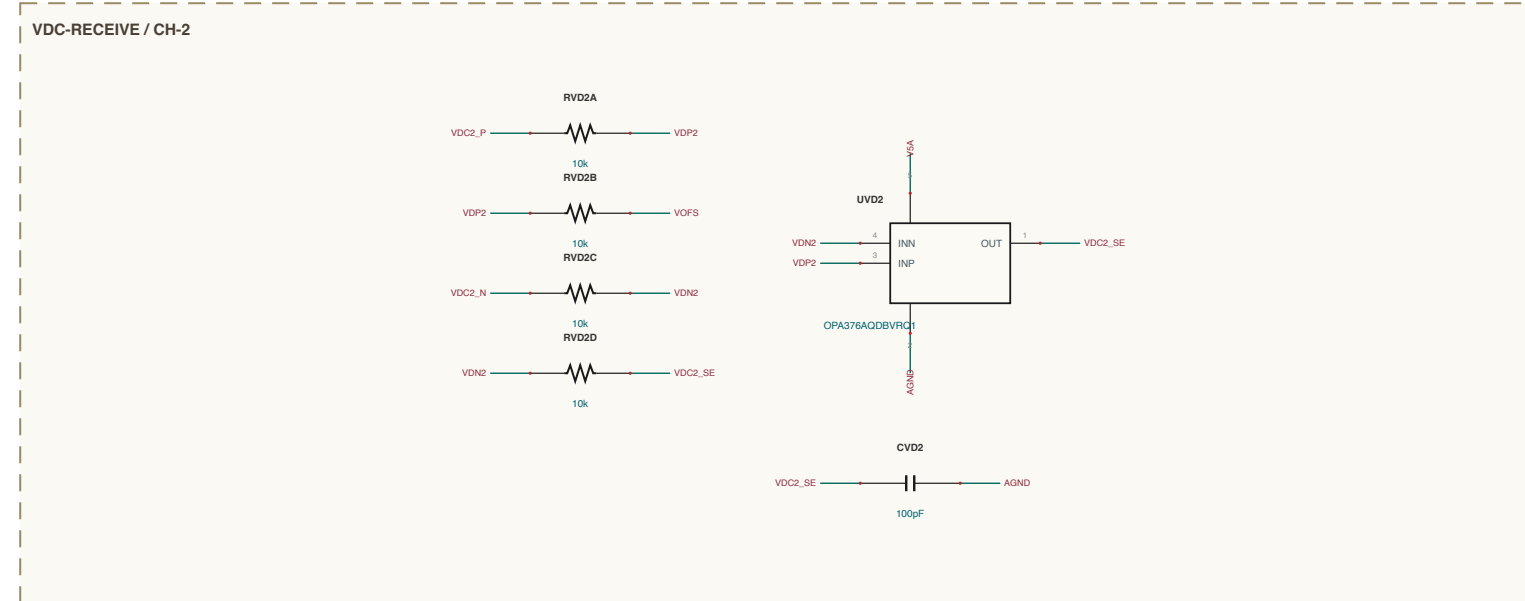

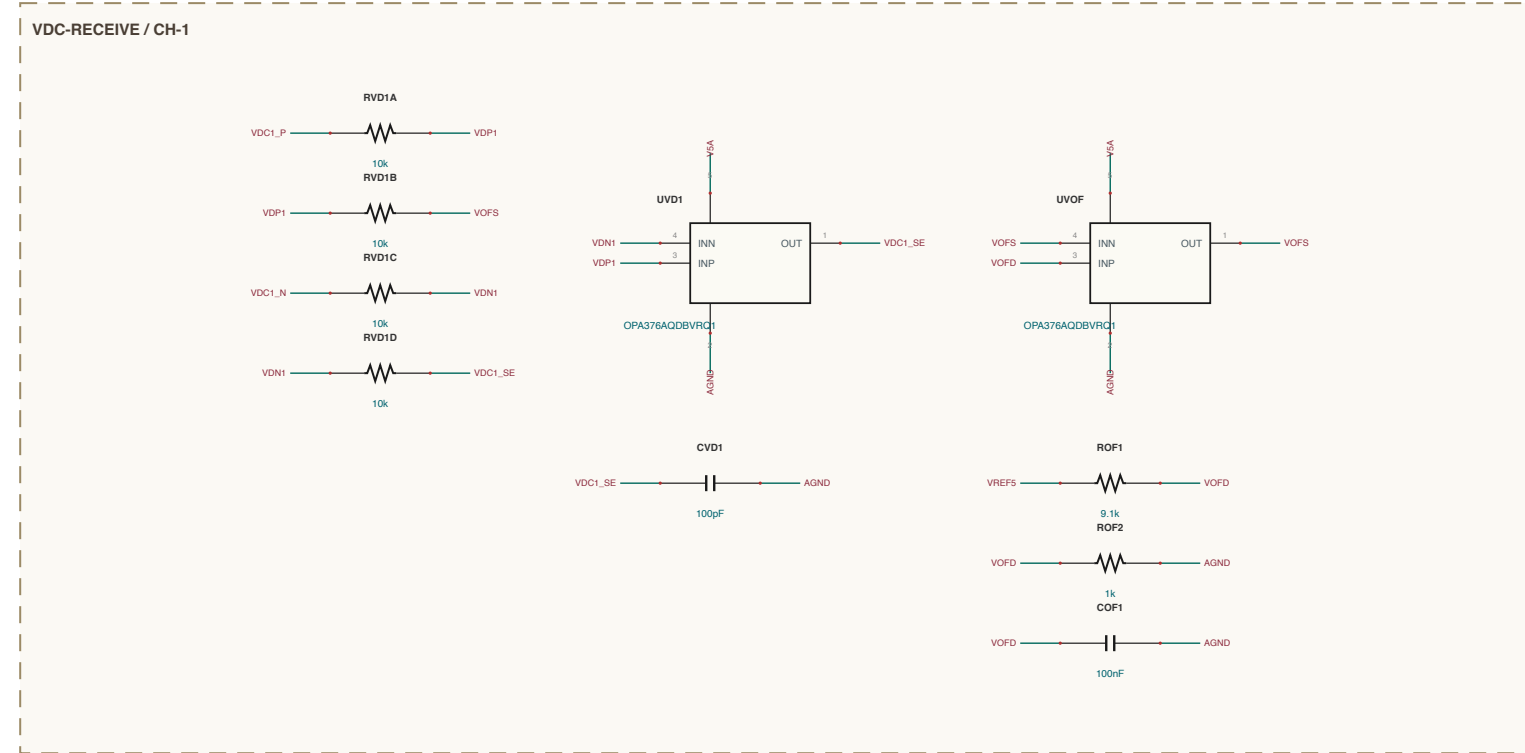

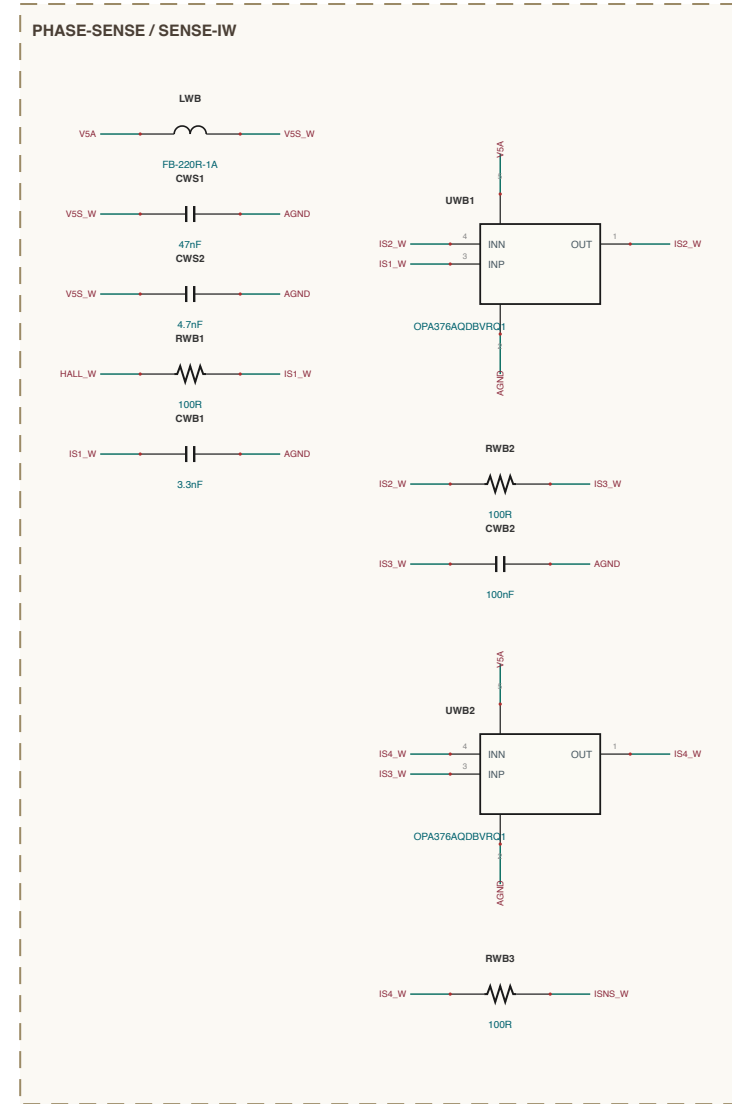

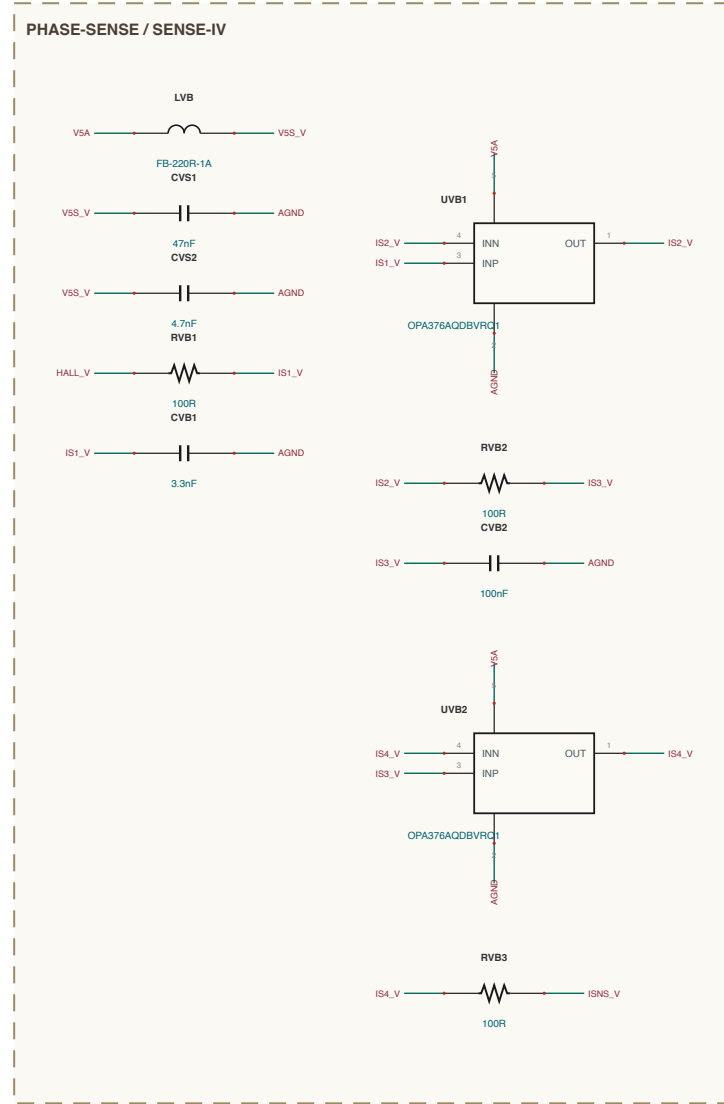

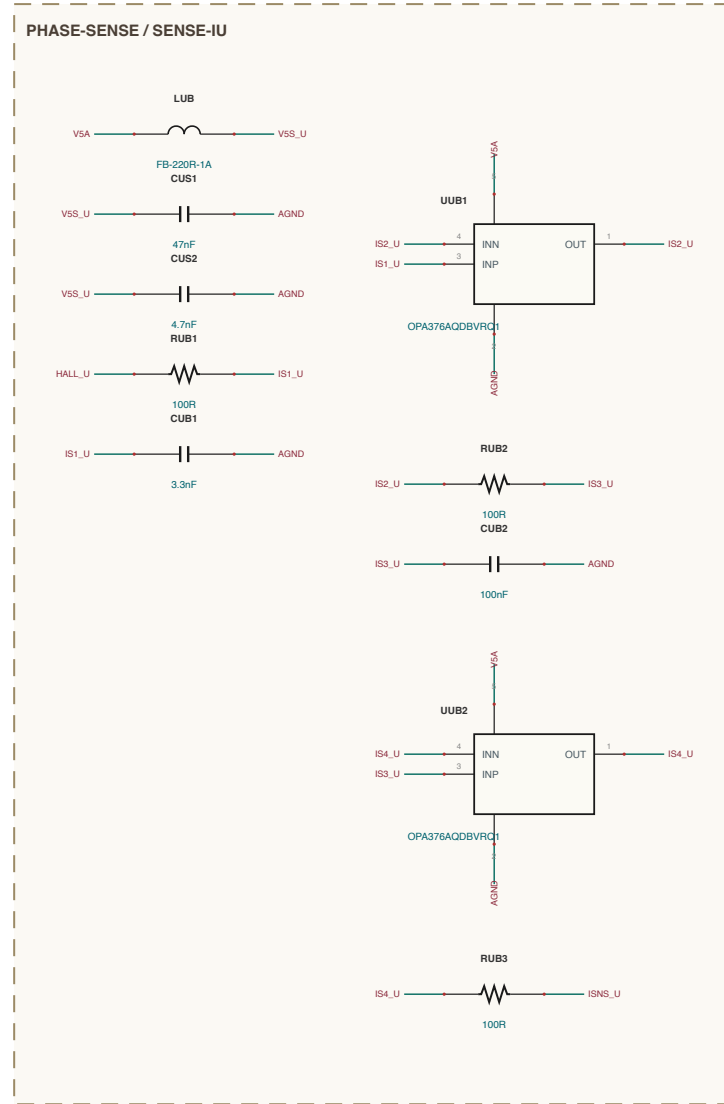

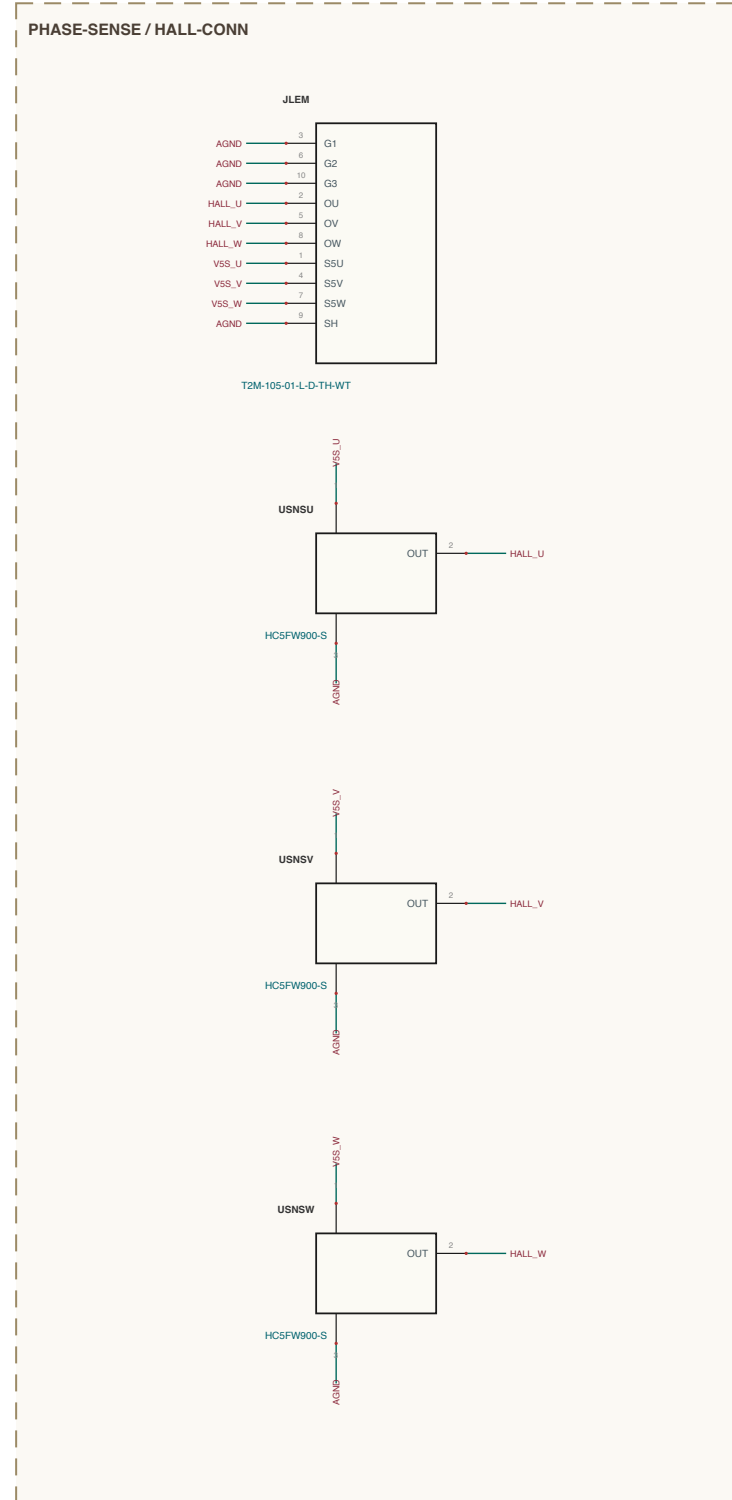

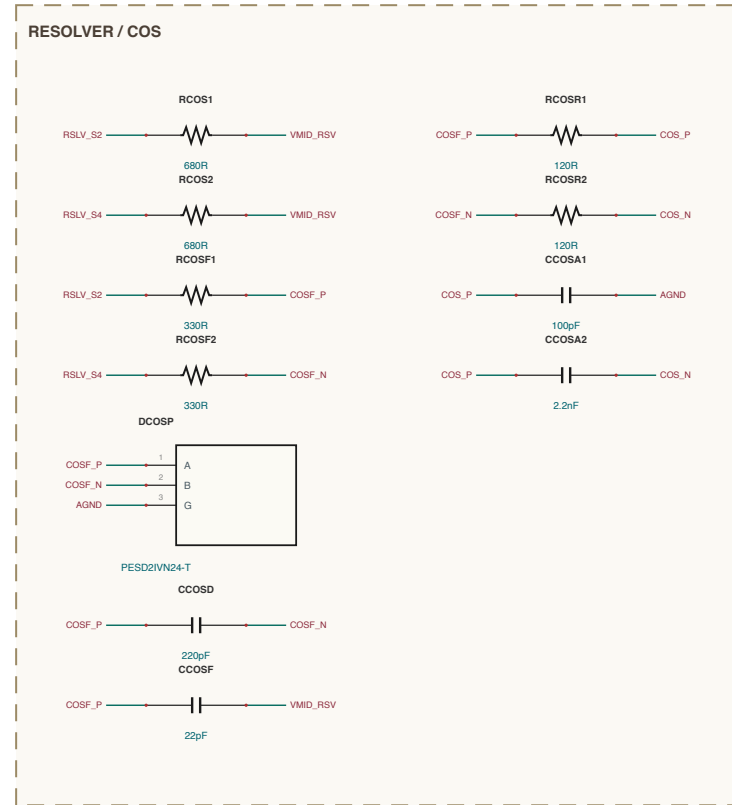

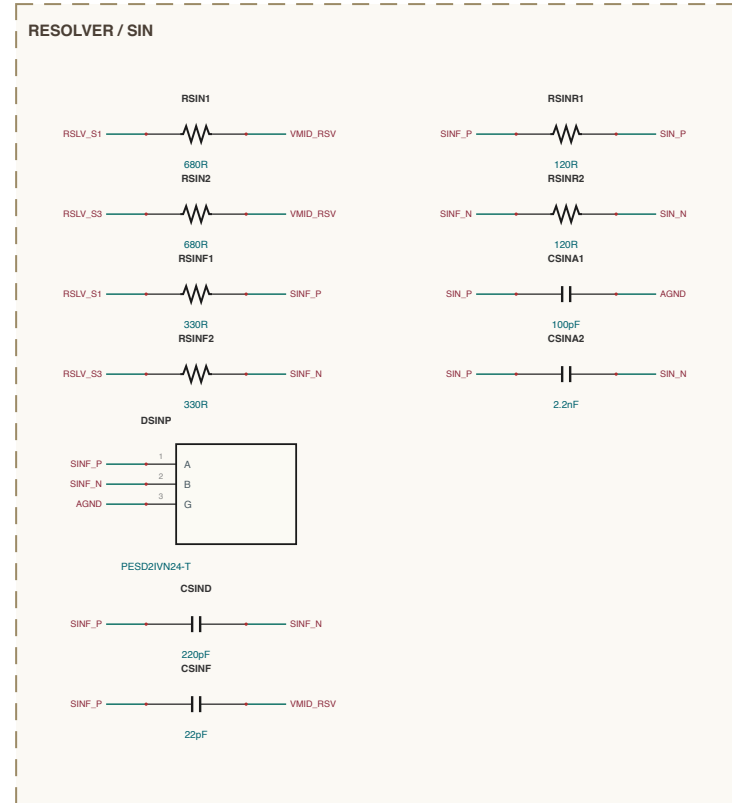

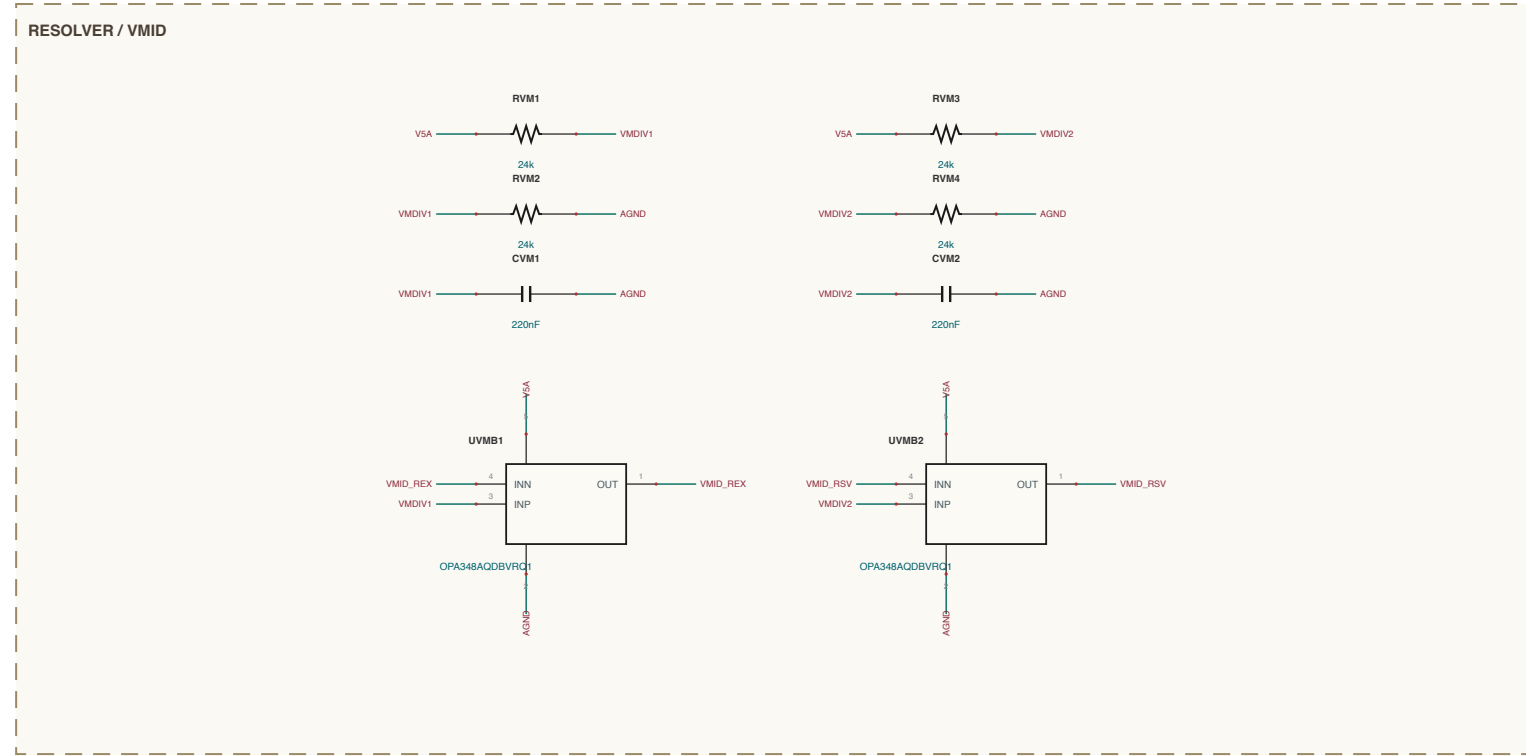

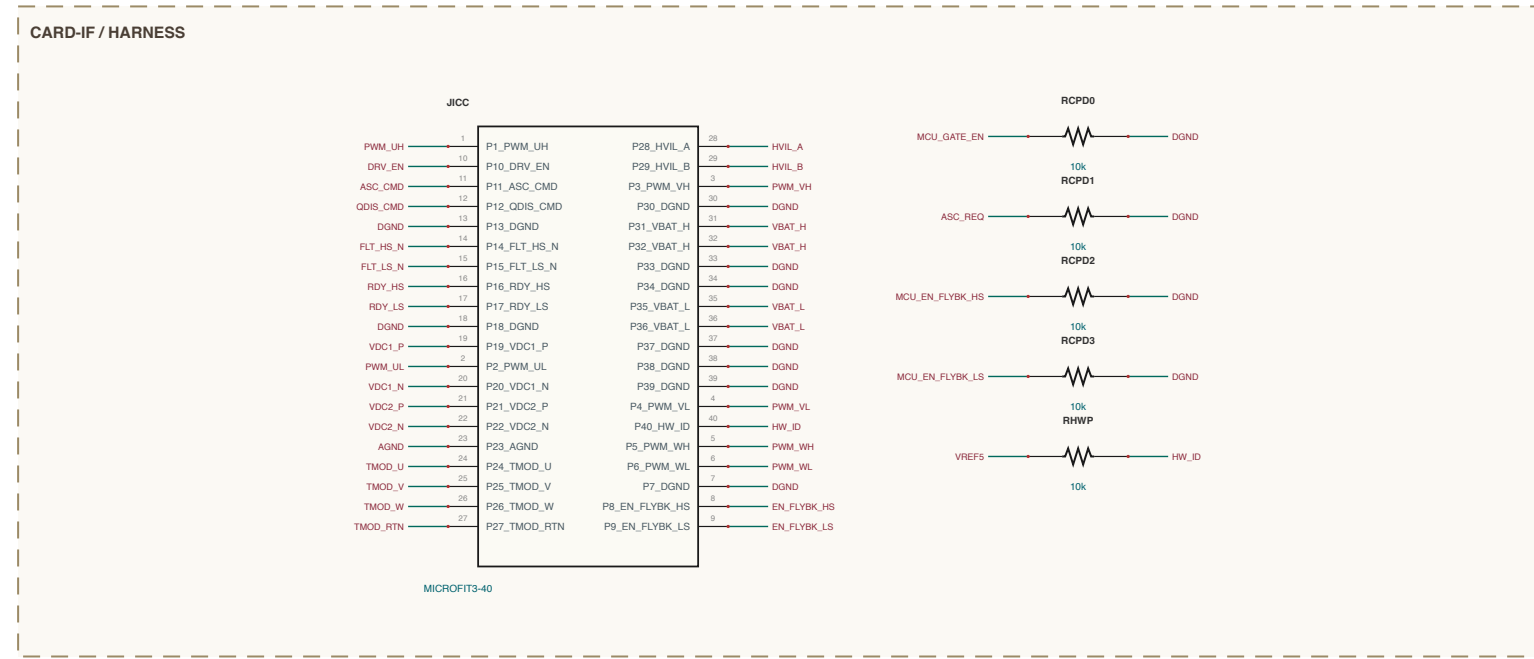

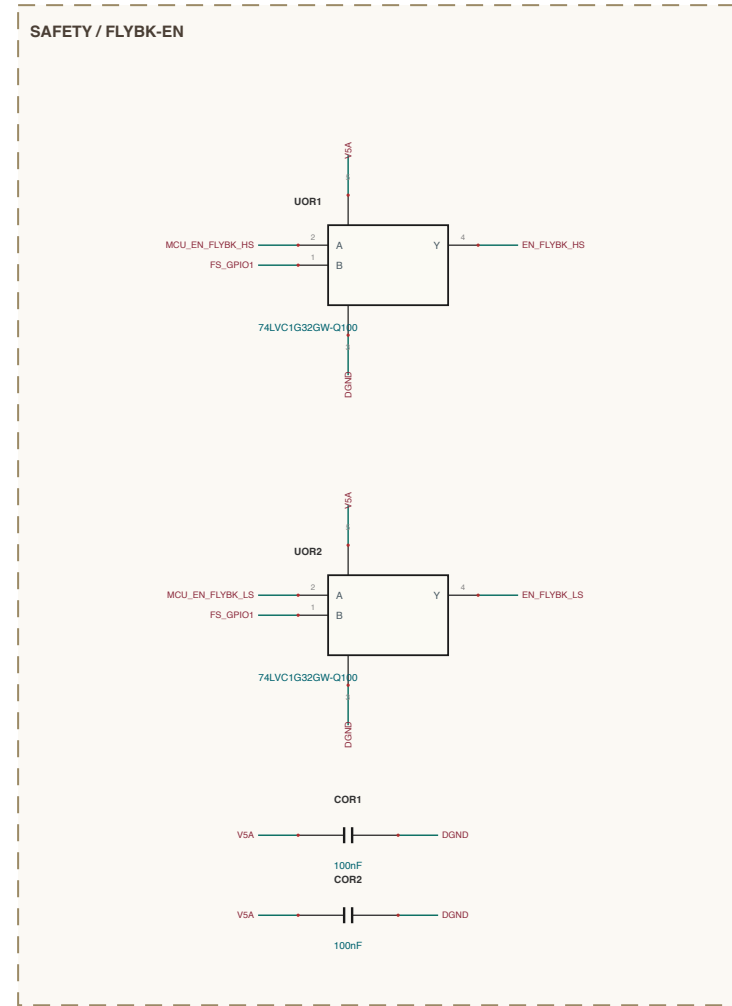

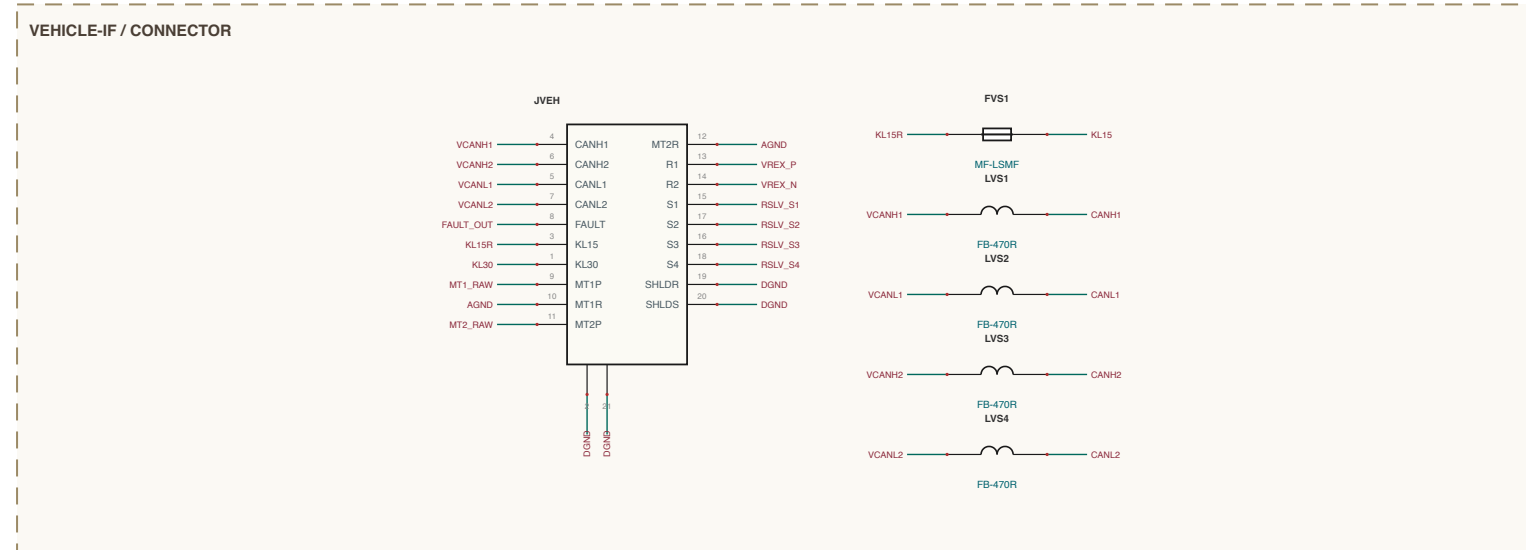

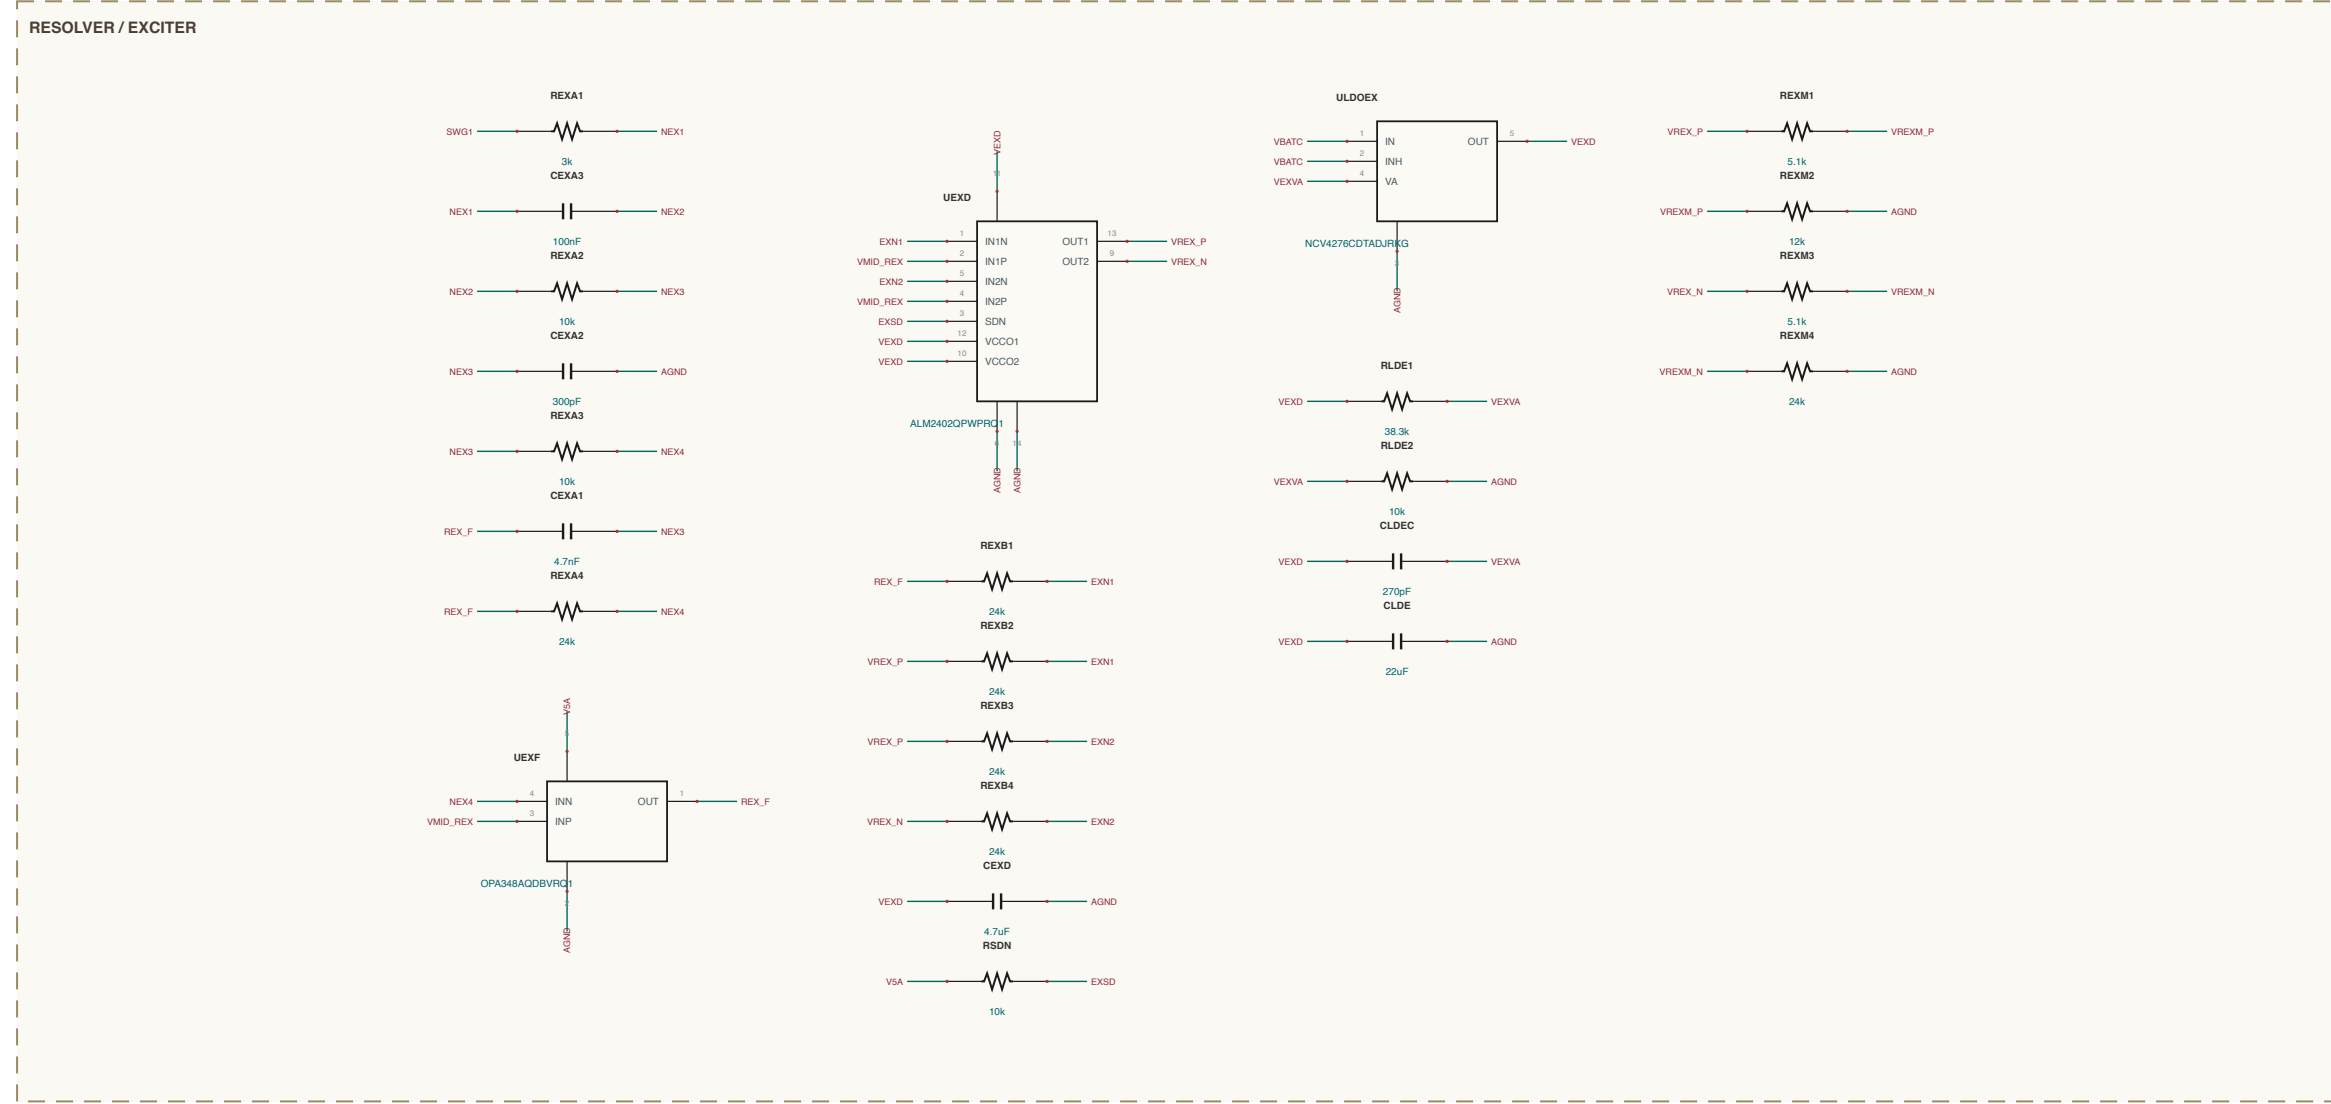

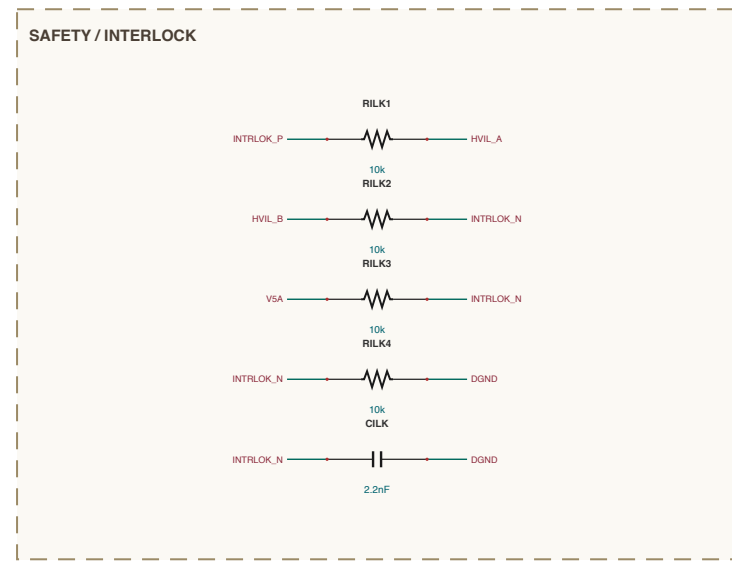

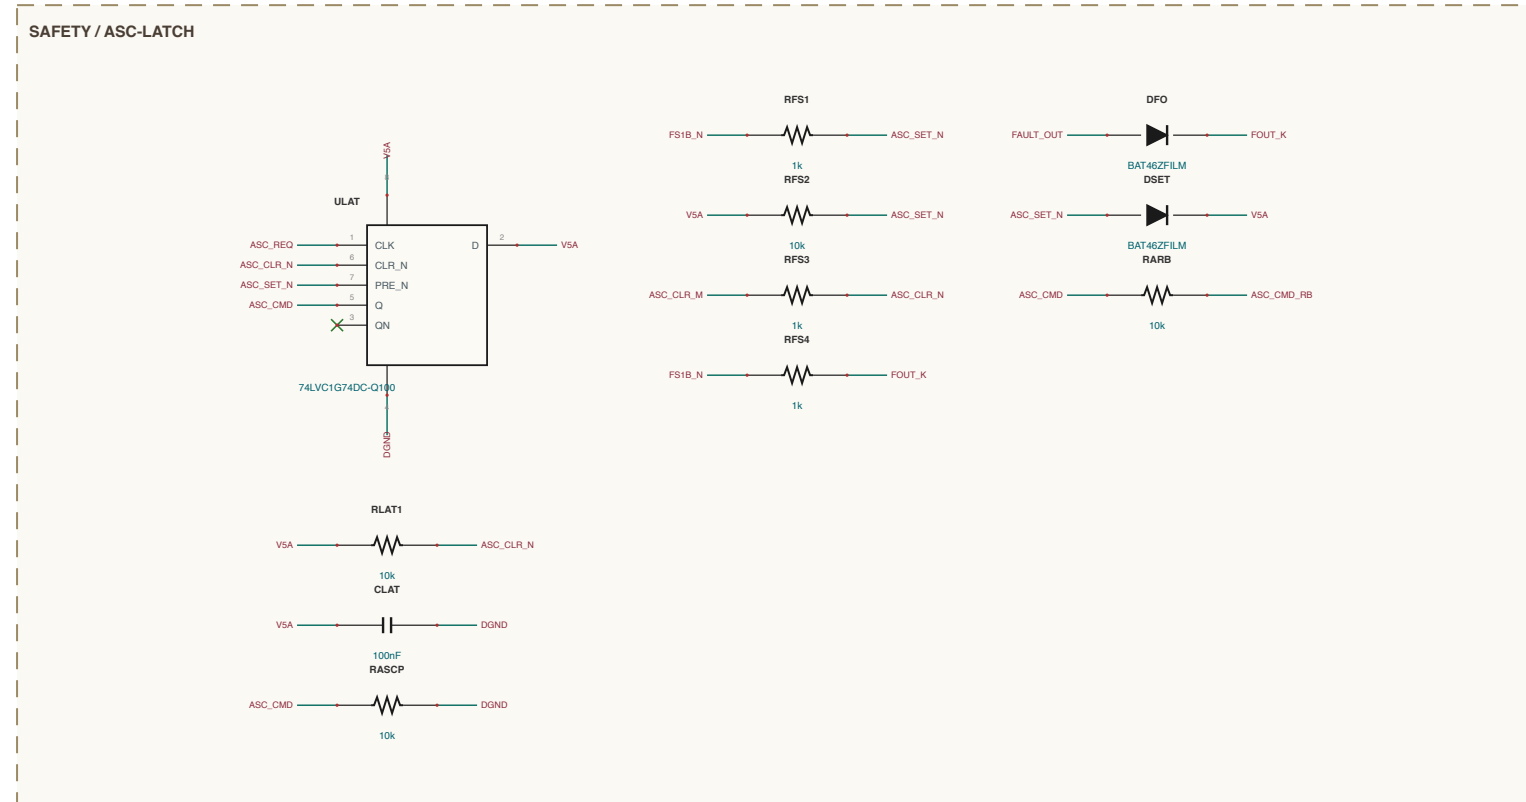

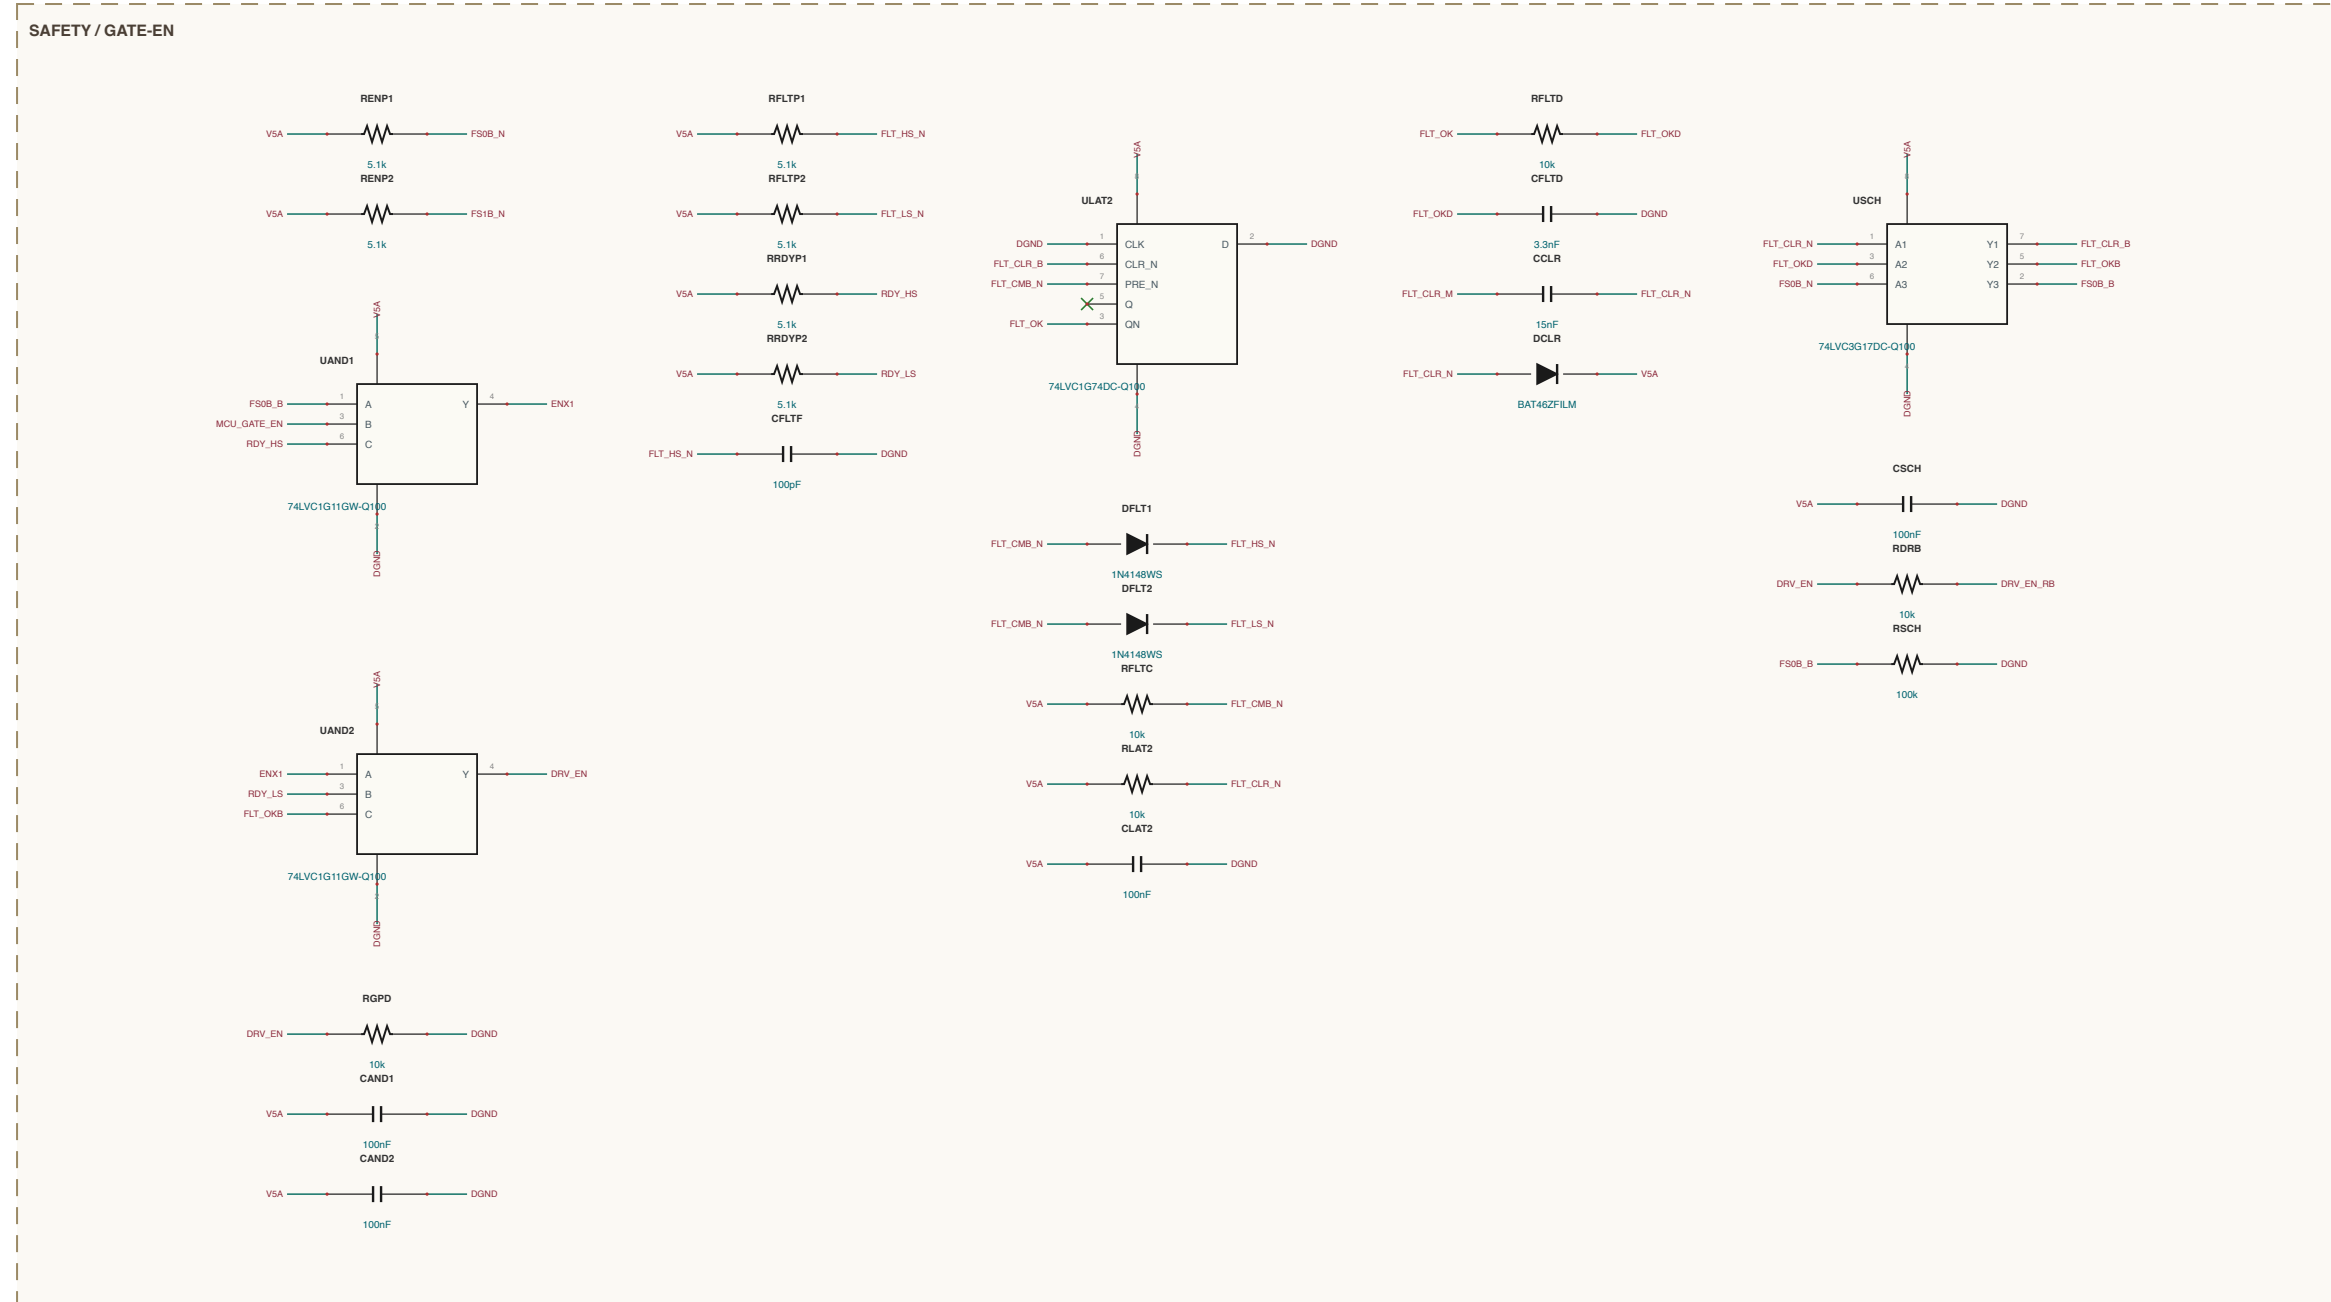

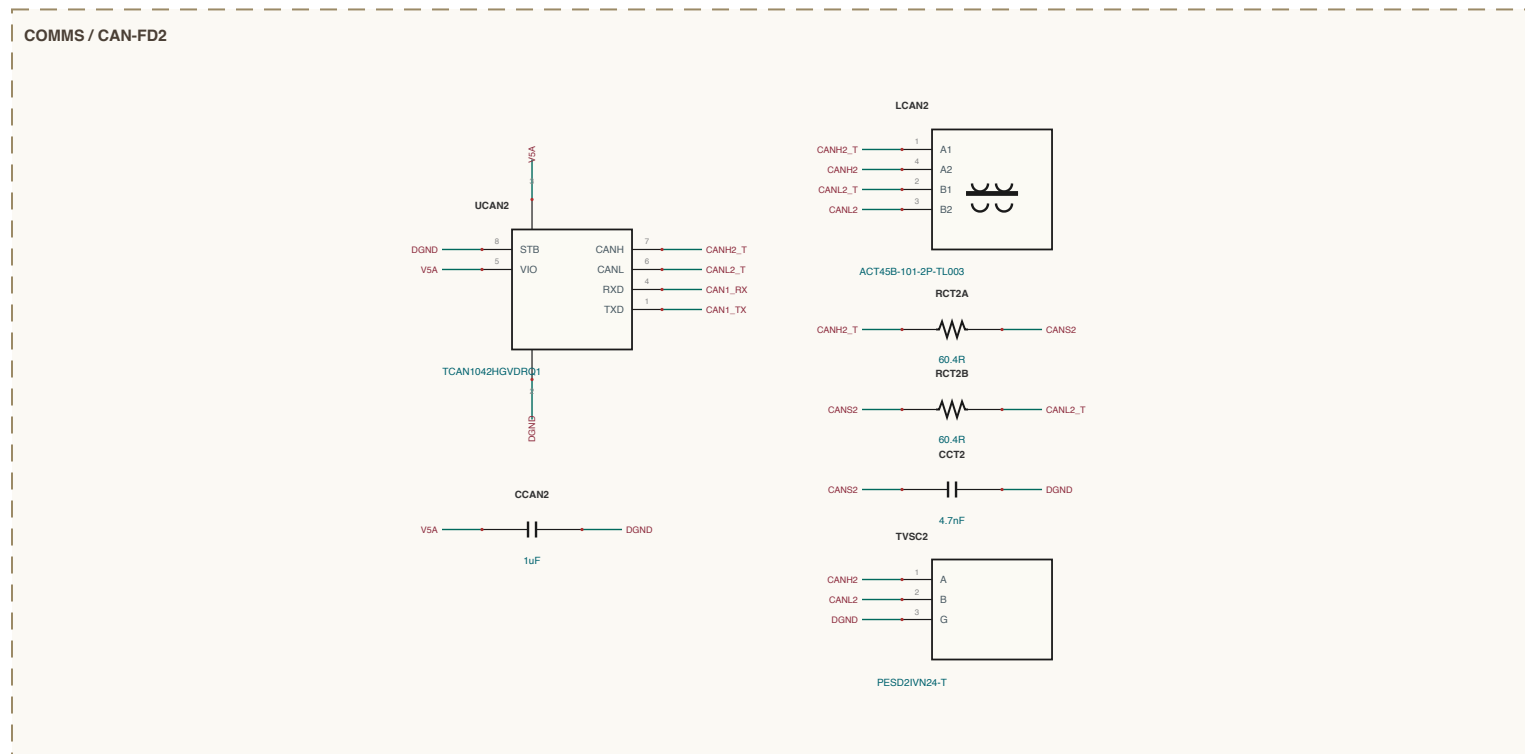

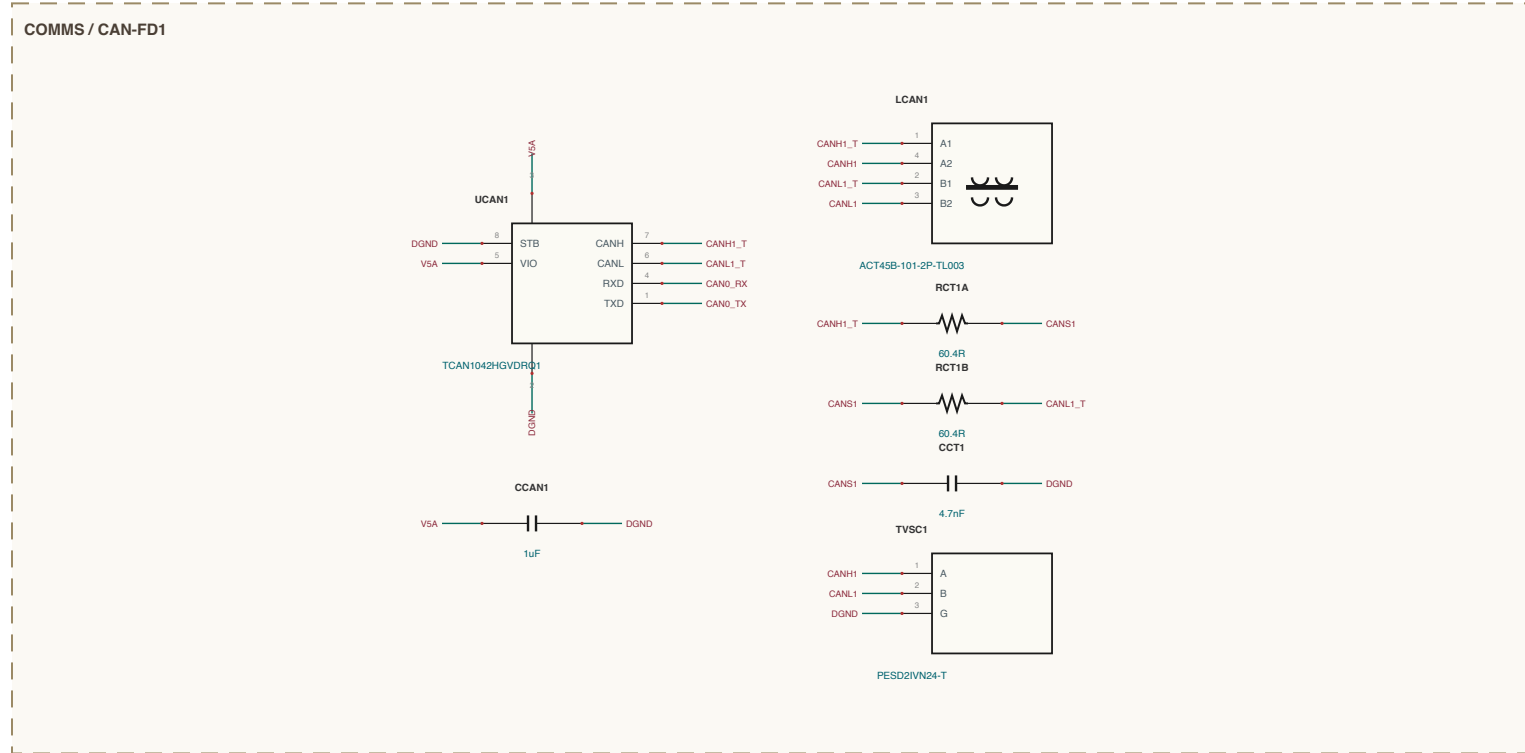

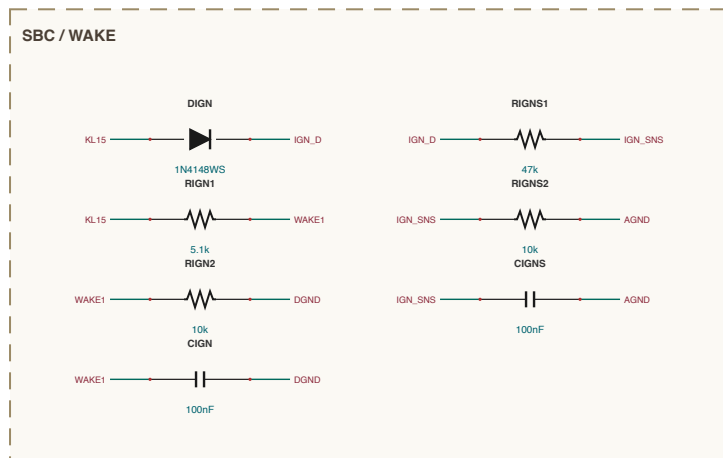

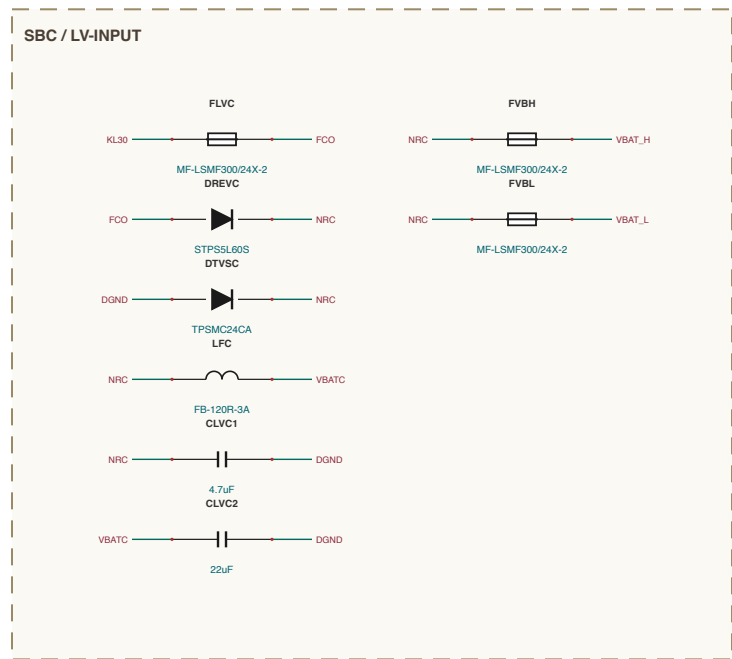

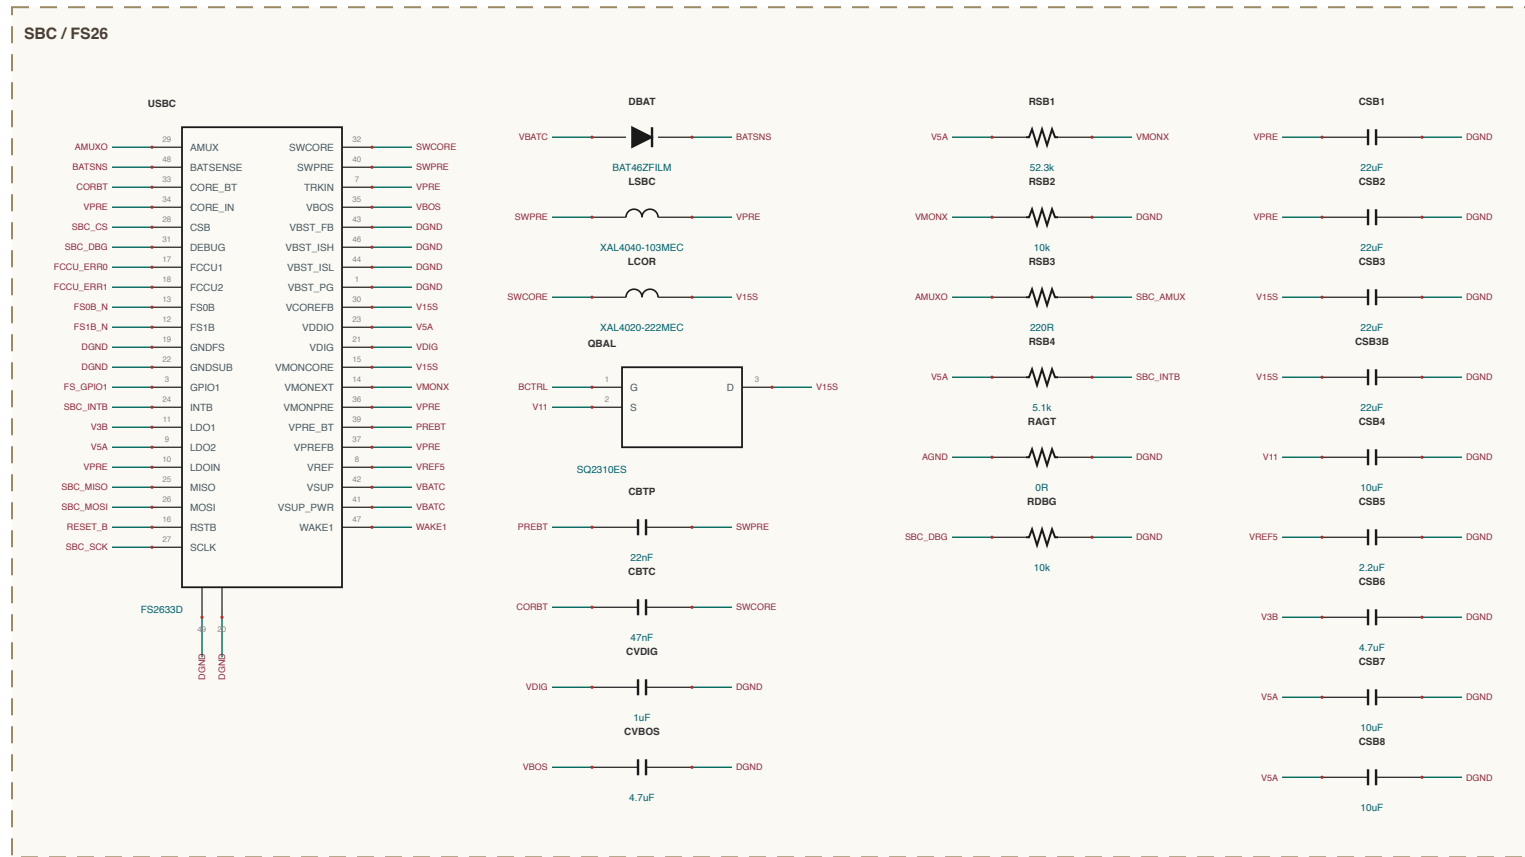

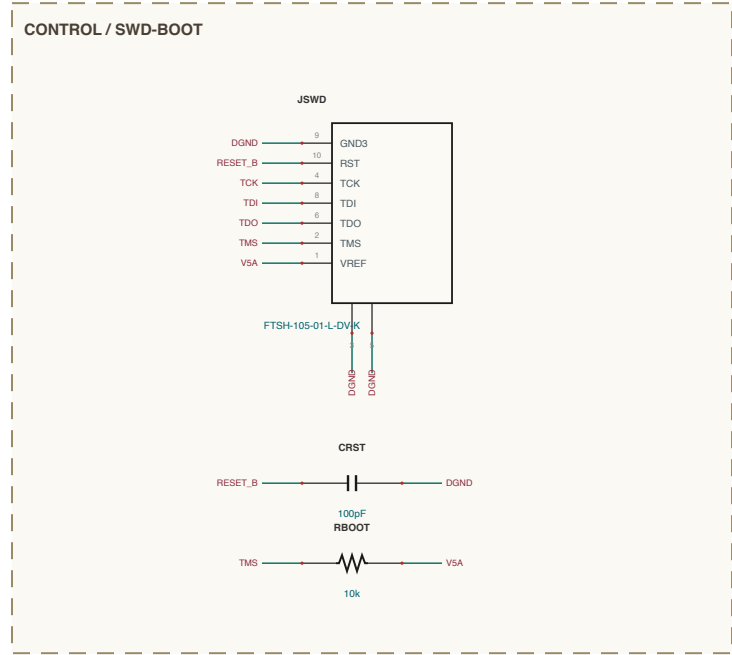

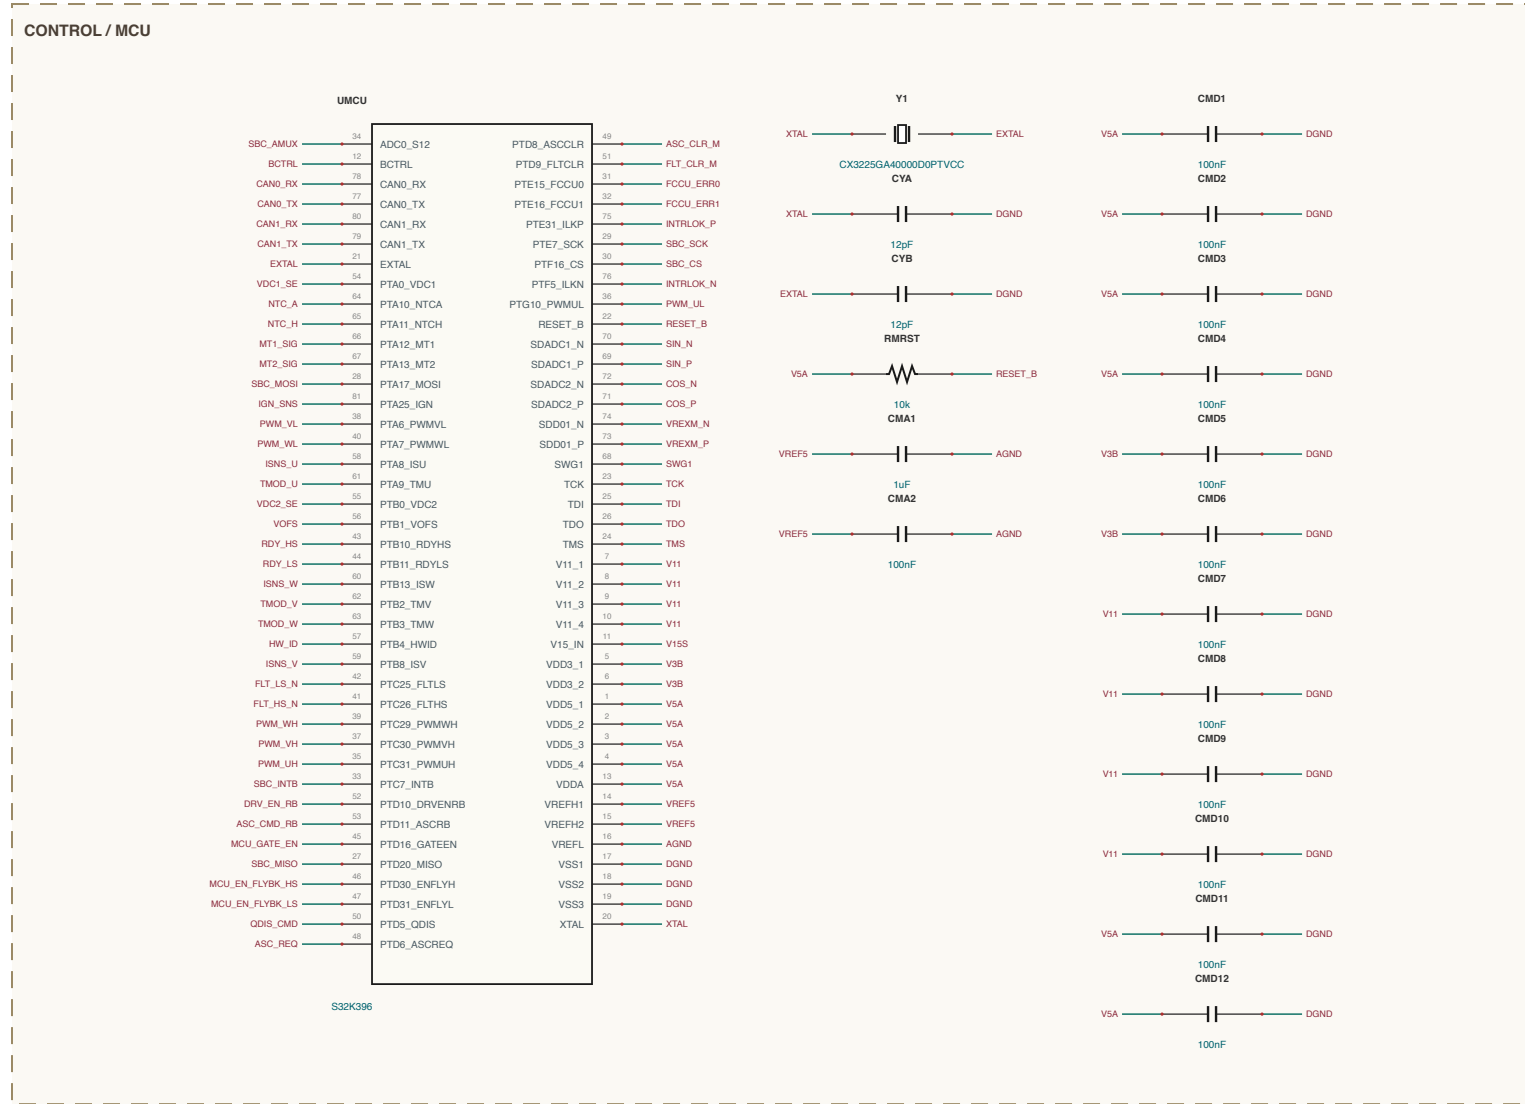

notes notes on another sheet - notes not printed (ONLY at the

named connections (also see *INTENDDASH LINKS* design branch)

[illegible]

SHEET INDEX	
228 Wp in Control card (C) - 4 of 4	
PHASE-SENSE - 4 sections	
RESOLVER - 4 sections	
SAFETY - 4 sections	
ISG - 3 sections	
TEMP - 2 sections	
COMMS - 2 sections	
CONTROL - 2 sections	
VOC-RECEIVE - 2 sections	
CARD-IF - 1 section	
VEHICLE-IF - 1 section	
VOC-A-7 - 28 sections - 280 components	
NET NAMING	
Internal connections are named for what they join	
Grounds - all pins made at that IC pin e.g. GND, VDD	
Resistors - all resistors of a value put e.g. R100, R1	
Resistors - same tag between Resistorsets e.g. R100, R1	
All others are explicit design notes	
Some names are explicit about a name tag, joined ONLY at the	
Internal connections are named for what they join
