

[illegible]

NET NAMING

internal junctions are named for what they join

Locals: often noted at front of pin e.g. **STRUC_WBP**

Resistor: M equivalent of a series pair e.g. **REL_A**

Resistor: series-to-leg between Resistor e.g. **R00D_12**

all others are explicit design name

series trace on another sheet - series not joined (NCP) in the

normal connection to the bus (INTERCONNECT) (LMS: design basis)
